

This year's Mari-Tech 2019 theme, ***“Full Speed Ahead: Firing on all Cylinders!”***, is perfectly captured in the speakers-gifts donated by Ottawa's **Dominis Engineering**.

Highlighting the subtlety and motion of marine engineering, Dominis sculpted each piece from a raw section of aluminum in their state-of-the-art, Dominis IPMS (Integrated Propeller Manufacturing System). These inspiring gifts were modelled from a precision propeller on a fast Navy vessel, and were expertly milled to their sleek final form and finish to a surface roughness of just 0.7 micrometers. The surface of the gift's blade was not hand polished, and is presented as machined.

**Dominis Engineering will feature more of their unique marine engineering abilities as an exhibitor at Mari-Tech 2019.**
